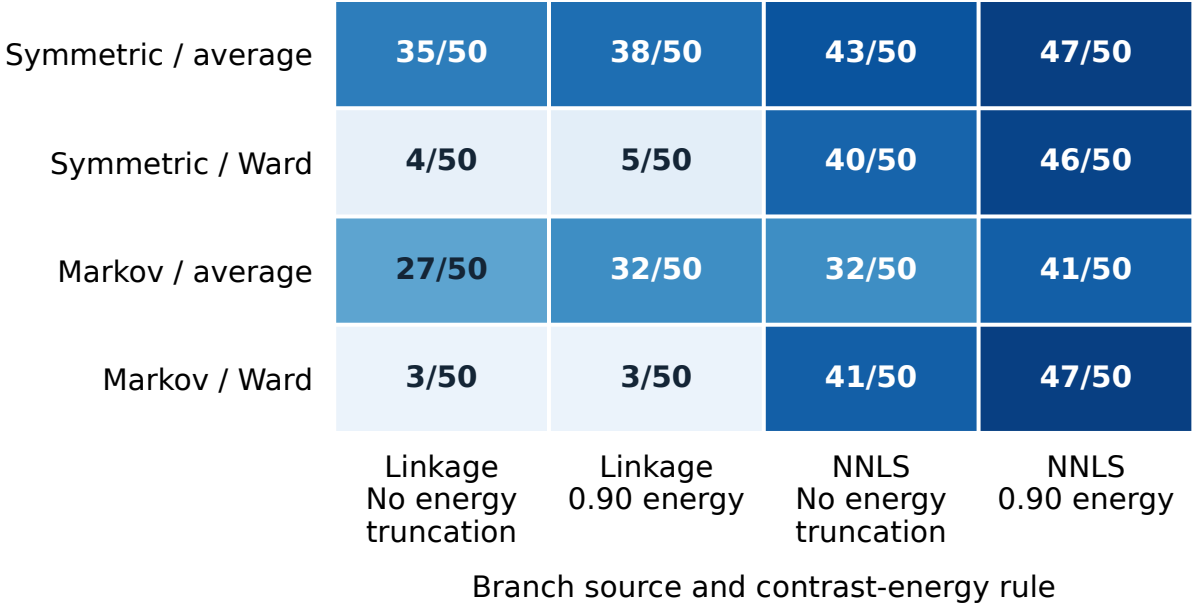
Subtree clustering diagnostics

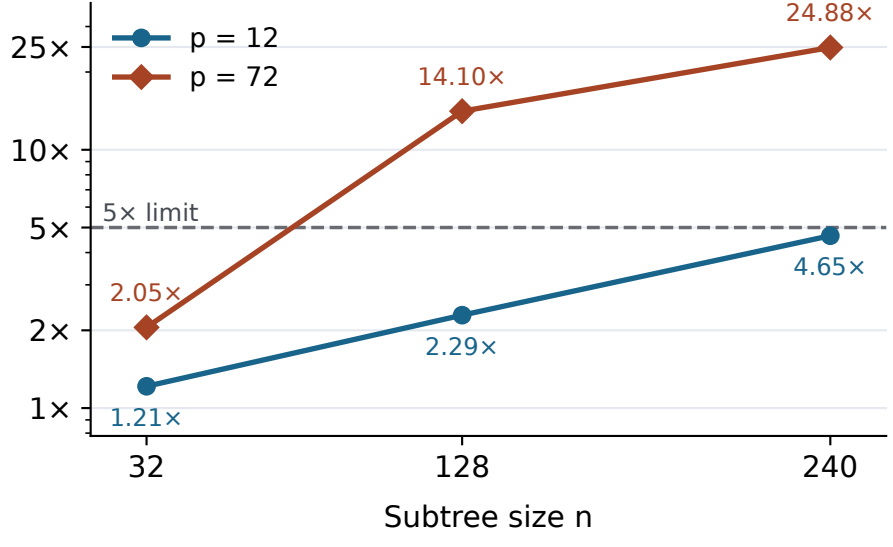
A Selected-root native sibling test

Gaussian null, n = 64, p = 12, nominal α = 0.01



B Isolated runtime preflight

Candidate / baseline median complete-pipeline time



A Root BH rejection counts on 50 shared Gaussian datasets per configuration. The base native projection remains in both arms.

B Three complete runs per method per case. Both p = 72 cases at n ≥ 128 exceeded the runtime limit.
