Where the populations go: development-seed assignments

Population 1 Population 2 Population 3 Population 4 Population 5 Population 6

Generating populations | **Family-diffusion TBS + NNLS** | **Spectral (known K=6)** | **K-means (known K=6)**

Dense row Disconnected Second coordinate

K=6, ARI=1.000 | K=1, ARI=0.000 | K=6, ARI=0.998 | K=6, ARI=0.998

Ordinary row Disconnected Second coordinate

K=6, ARI=1.000 | K=6, ARI=0.998 | K=6, ARI=0.998 | K=6, ARI=0.998

Dense row Connected Second coordinate

K=6, ARI=1.000 | K=4, ARI=0.446 | K=6, ARI=0.763 | K=6, ARI=0.698

Ordinary row Connected Second coordinate

K=6, ARI=1.000 | K=6, ARI=0.697 | K=6, ARI=0.749 | K=6, ARI=0.694

First coordinate

Only the first two of 30 features are shown; these contain all population-mean signal. All 30 features enter clustering.
Colors are aligned to generating populations by maximum label overlap; the black ring marks the designated observation.
Connected controls move the two isolated population means closer, changing both graph connectivity and population separation.
